

الدخول إلى إعدادات حساب Google

افتح حساب Gmail المطلوب استخدامه في إرسال رسائل الموقع، ثم اضغط على صورة الحساب واختر **Manage your Google Account**.

فتح إعدادات الأمان وتسجيل الدخول

من القائمة الجانبية داخل حساب Google اضغط على **Security & sign-in**.

التأكد من تفعيل Step Verification-2

يجب أن تكون خاصية Step Verification-2 مفعلة على الحساب حتى تتمكن من إنشاء App Password. إذا كانت الحالة On كما في الصورة، انتقل إلى الخطوة التالية. وإذا لم تكن مفعلة، اضغط عليها وأكمل خطوات التفعيل أولاً.

البحث عن App passwords

من خانة Search Google Account اكتب App passwords، ثم افتح النتيجة التي تحمل نفس الاسم.

إنشاء App Password جديد

اكتب اسمًا واضحًا للتطبيق، مثل **WordPress** أو **Dr Huda Sultan**، ثم اضغط **Create**.

← App passwords

App passwords help you sign into your Google Account on older apps and services that don't support modern security standards.

App passwords are less secure than using up-to-date apps and services that use modern security standards. Before you create an app password, you should check to see if your app needs this in order to sign in.

Your app password for your device

APP PASSWORD HIDDEN

How to use it

Go to the settings for your Google Account in the application or device you are trying to set up. Replace your password with the 16-character password shown above.

Just like your normal password, this app password grants complete access to your Google Account. You won't need to remember it, so don't write it down or share it with anyone.

Done

إدخال إعدادات Gmail SMTP في WordPress

داخل إعدادات **Other SMTP** أدخل القيم التالية، ثم احفظ التغييرات.

Other SMTP

SMTP Host:
Your mail server

Type of Encryption: ☐ None ☒ SSL ☐ TLS
For most servers TLS is the recommended option. If your SMTP provider offers both SSL and TLS options, we recommend using TLS.

SMTP Port:
The port to your mail server

SMTP Authentication: ☐ No ☒ Yes
This options should always be checked Yes

SMTP Username:
The username to login to your mail server

SMTP Password:
The SMTP Password to login to your mail server. The saved password is not shown for security reasons. You need enter it every time you update the settings.

Disable SSL Certificate Verification: ☐
As of PHP 5.6 you will get a warning/error if the SSL certificate on the server is not properly configured. You can check this option to disable that default behaviour. Please note that PHP 5.6 made this change for a good reason. So you should get your host to fix the SSL configurations instead of bypassing it

Backup Connection:
Set backup email address for your WordPress emails. If primary mailer fails then backup mailer will be used to send the mail.
